SCS-SECURE MESSAGING

Secured modern communication system used in multi-terminal or devices (mobile/desktop) and provides a **whatsapp**-like interface.

Secure Messaging projects

Command, Control & Seamless Comms Ready

High Level Personnel Secured Comms
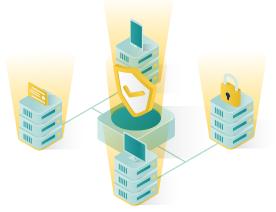

Video Soft Phone solution capability

VPN Security

Data traffic encryption -Flexible and all-round type Route Based
Public Key Infrastructure(PKI) Certificate
Management Firewall - State-full Packet Filter Capability
Lossless data compression
Traffic and System Graph
Log Management

Choose who you trust with your data

Choose where to keep your data by selecting a server you trust, or running on your own server.
Servers can be configured as easy as a single click and is extendable with advanced features such as anti-virus and custom behavior.
Built on the Matrix protocol, servers are always interoperable, and you can migrate server data at any time.

Security

Data can be end-to-end encrypted - no eavesdropping on your conversations, not even server admins.

Friendly encryption features includes secure key backup - allows you to recover your encrypted data even if you lose or break a device. An advanced verification features to avoid user's account from being compromised.

Voice & Video Conferencing

One touch voice and video calls and conferences on all platforms. On mobile, respond to calls as natively as you do a normal phone call.

During a conference, you can also share a link to it with other users, allowing them to join via their browser, even if they're not a SCS-SM user.

Share Files

Send, receive and view files in any conversation. Drag-and-drop for quick sharing, and browse archives or search for files easily in the file panel.

Intelligent Notifications

Customize notifications to suit your priorities. Receive notifications whenever anyone mentions your name, and define keywords to trigger if you're following a specific topic.

Other Apps, Stickers, Widgets & Bots

Interact with other apps and services directly from your rooms.

Use Bots to help you with tasks, like searching Giphy for GIFs or Google Images. Embed widgets directly within your rooms to collaborate on documents together.

Add stickers from our ever-growing sticker packs.

Bridge other apps and networks

Communicate with users using other apps with bridges.

In a SCS-SM room, add a bridge to another app (like a Slack channel) to transparently talk to each other without ever leaving your respective apps.

SCS-SM is everywhere you are (Any Platform)

Access SCS-SM from your browser from anywhere.
On mobile, install native apps for iOS & Android.
On desktop, install native apps for macOS, Windows & Linux.
